The Problem

- Industry standard for seed phrase storage exacerbates the evident storage problem
- Currently notecards, or other paper storage mechanisms are the best that the industry has to offer users at scale
- There is a critical need for better services need to provide safer storage to retail investors

"At Safebay, we provide both an easy and secure preventative wallet recovery service.

We already have a proof of concept that we will demo shortly, but we plan to offer hardware and software options for safe data storage after an initial round of seed funding."

FUTURE VISION + PLAN

Next steps

Security, Liability, Disclosure

- Your information is very important to us. We are going to focus on the future of security.
- Solid infrastructure to show to incubators
- We are aiming to raise 1-2 million in the private sale
- Decentralized data mesh node networks.
- Scale our database with milisecond tx throughput
- Decide whether we want to build hardware or build on web
- Allow users to connect a wallet and make transactions on our site.
- Build out utility to target people with no experience in crypto
